TIF EAGLE
SOARS AT DANIEL ISLAND

"When our members go out and play other courses with other ultradwarfs, or even bentgrass, they invariably come back and tell me that our TifEagle greens are still some of the best they've ever played on. And my Beresford Creek greens are going on 12 years old."

Mike Fabrizio-Director of Grounds and Golf Maintenance
Daniel Island Club, Charleston SC

You'll find TifEagle Bermudagrass on both of the premier golf courses at the exclusive Daniel Island Club in Charleston SC. The Rees Jones-designed Ralston Creek Course and the Fazio-designed Beresford Creek Course each sport world-class TifEagle greens, the ultimate ultradwarf putting surface. Thirty-five year veteran Mike Fabrizio (CGCS), Director of Grounds and Golf Maintenance, is responsible for the day-to-day management and upkeep of these two top-flight courses located in the heart of this upscale residential golf community. It was Mike who made the decision to go with TifEagle. "We were looking for something a little more stable than Tifdwarf. We looked at Champion and TifEagle, but the TifEagle was a University of Georgia release and was a little more suitable for our soils and climate. Our members love it. So do I, because I know TifEagle will give me bentgrass speeds, but without the headaches. We use the stimpmeter as a management tool, and if speeds drop below our standard, we know they are growing faster than our clip." Take a lesson from Mike Fabrizio. Whether you're renovating your existing greens or planning a brand new facility, insist on the best. Specify certified TifEagle Bermudagrass by name. You can sod it, sprig it or even no-till it under the right conditions. For more information and a list of TifEagle growers, visit us at www.tifeagle.com. Or call 706 552-4525.
